

Video Quiz

Video Title: Chemical Hazard Information

Length: 17:00

Vendor: MSHA (Mine Safety & Health Administration) VC 971

Synopsis:

1. Eddie and Joe almost drank windshield washer fluid. True __, False __
2. MSDS stands for _____.
3. MSDSs are divided into a number of sections. True __, False __
4. A chemical with a specific gravity of greater than 1.0 floats on water. True __, False __
5. A chemical's specific gravity is an important consideration in fighting fires. True __, False __
6. A chemical's vapor density helps you determine where the chemical will be located in a room. True __, False __
7. The vapor density of a gas or vapor tells you if the vapor of a chemical is lighter or heavier than air. True __, False __
8. The flash point of a chemical is the temperature at which it produces sufficient vapor to ignite. True __, False __.
9. Gasoline will ignite with a spark or flame anywhere south of the arctic circle in January. True __, False __.
10. Diesel fuel will not ignite at ordinary room temperatures. True __, False __.
11. PEL stands for particle emission level. True __, False __.
12. TLV stands for toxic level value. True __, False __.
13. An MSDS contains information on personal protective equipment needed to work with a hazardous chemical. True __, False __.
14. MSDSs must all be written in the same format. True __, False __.
